

# Industry Trends and the Future of Demand Response

Paul Heitmann

Director, Business Development

# Market Forces

## What if...

- ... demand grew 50% in 20 years?
- ... 50% of skilled workers retired in 10 years?
- ... carbon constraints became severe?
- ... fuel costs kept going up?
- ... power quality demands got much higher?
- ... renewables were mandated all over the country?
- ... reliability rules became more stringent?

## Would you...

- ... build 50% more power plants... hire 50% more workers... build 50% more power lines... raise rates over and over again?

What if they all came true... all at once

# Factors Driving the Smart Grid Evolution

- 1 Distributed Communications
- 2 Supply and Demand Tech
- 3 Architectural Standards
- 4 Demographic/Economic Shifts
- 5 Government Policies

Technology Shifts

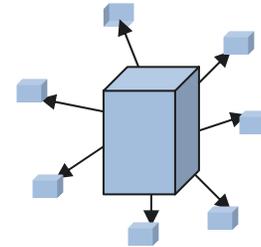

Behavior Shifts

# Intelligence to the Edges

## Centralized

Mainframe

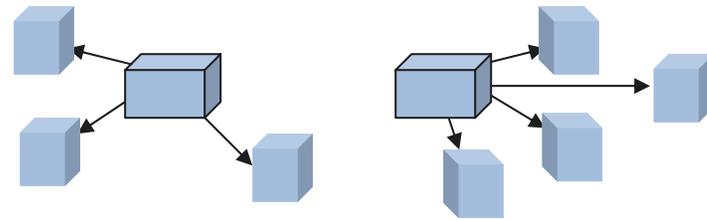

Intelligence in middle

## Distributed

Client-server

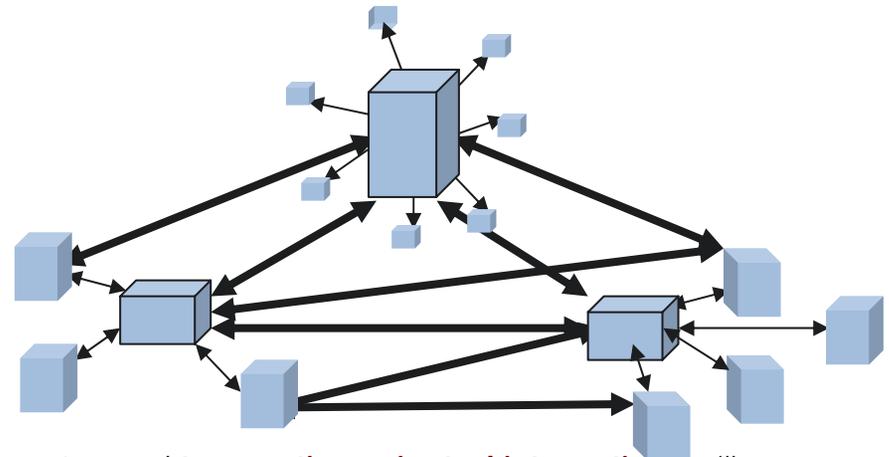

Intelligence migrates out

## True network

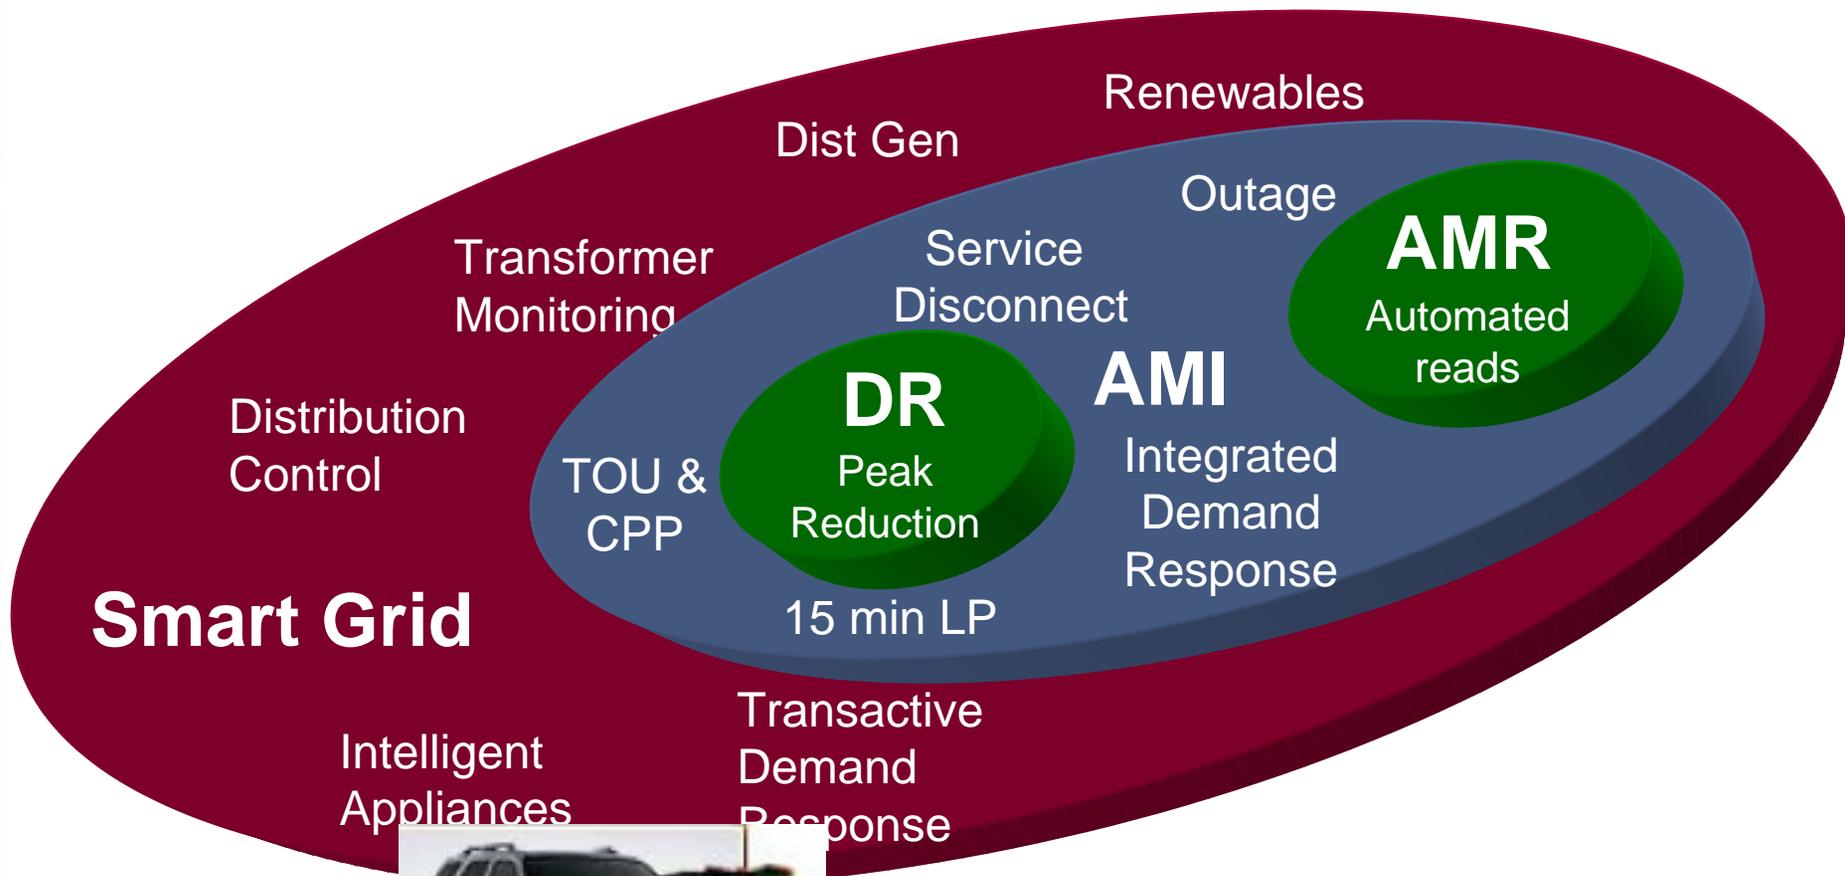

Internet

Intelligence everywhere

The move from control-based interactions toward **transaction-oriented interactions** will significantly improve information exchange between the electric system devices and the end-use consumers.

# DR & AMR / AMI / SmartGrid

# Smart Grid Transition

Then Comes PHEV storage...  
... and Solar/Wind Microgrids

## Common Platforms

AMI Enterprise

Demand Response Software

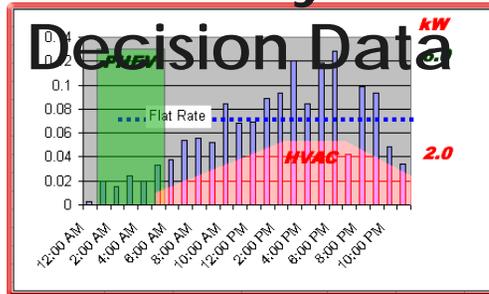

## Robust Signalling

VHF Paging

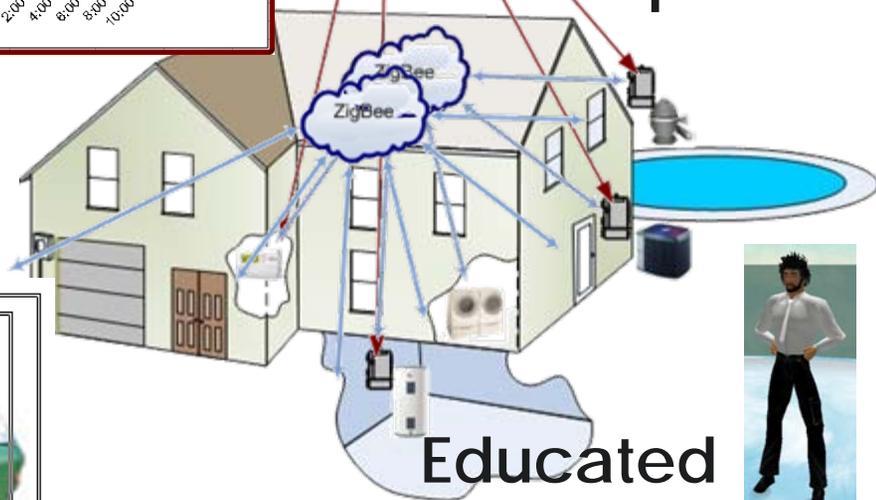

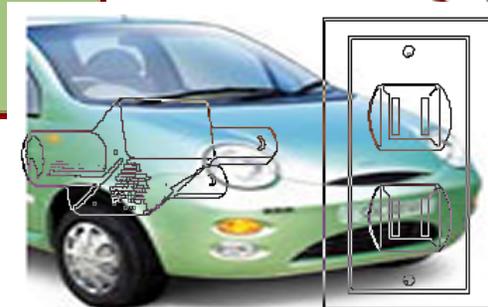

## Timely

## Automated Response

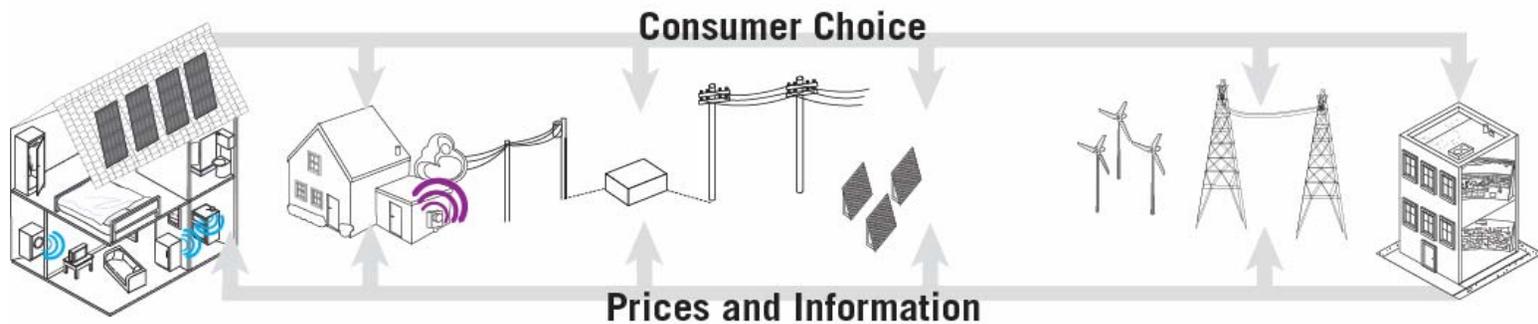

## Clean Technology

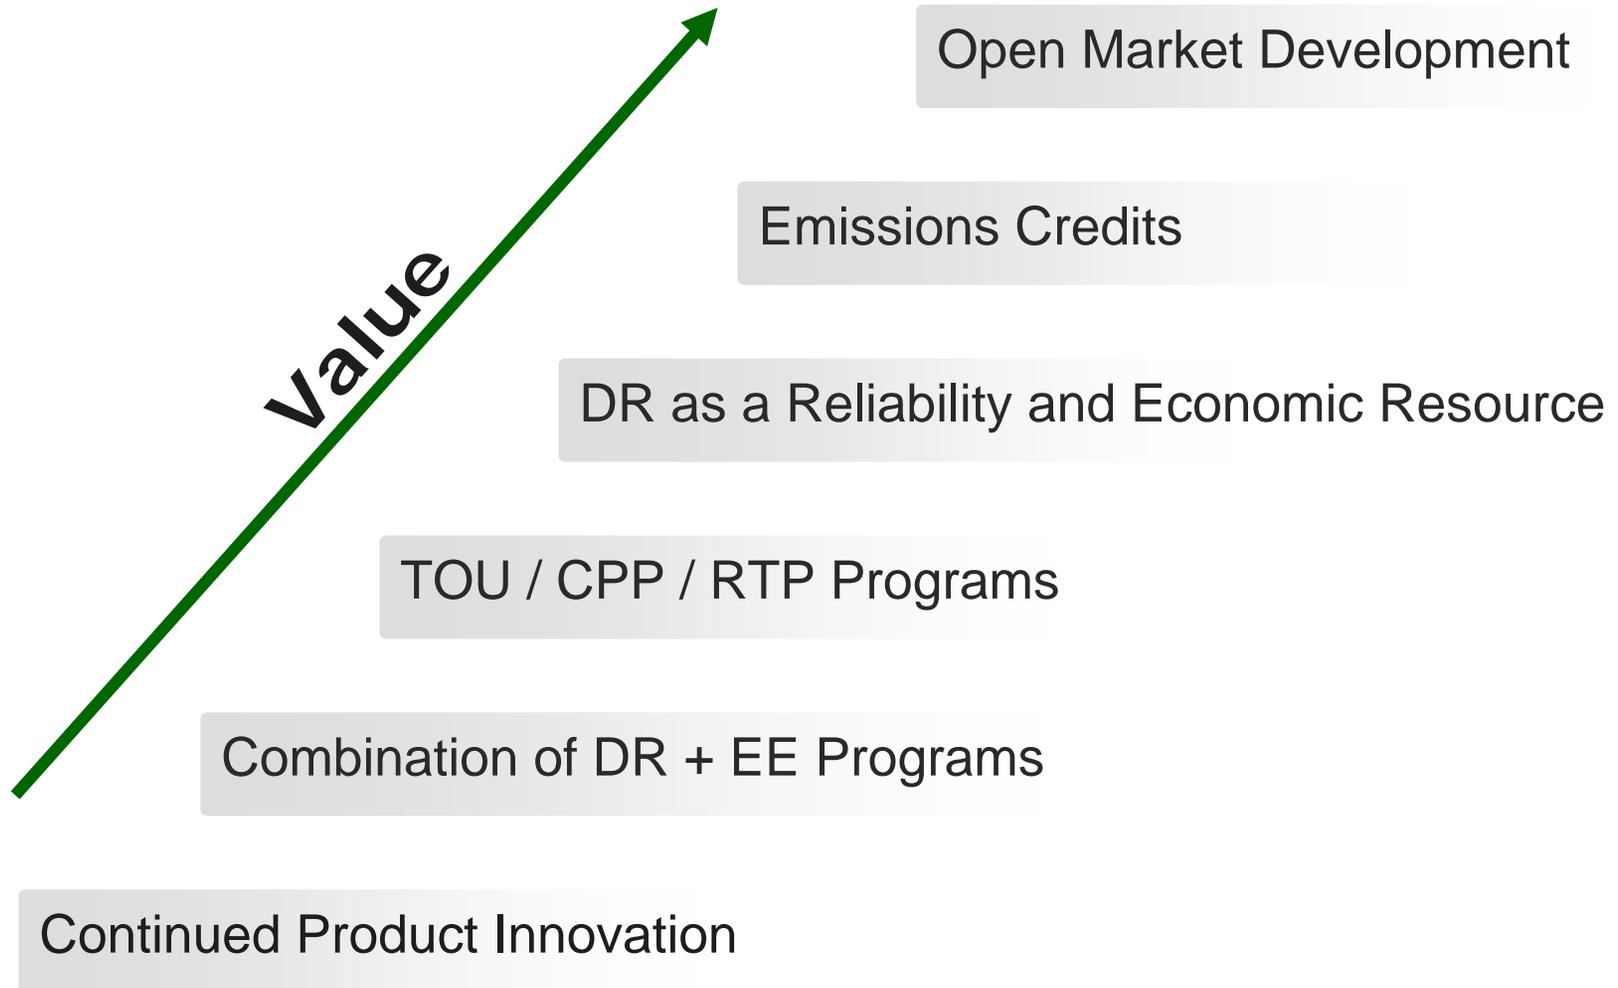

## Educated & Motivated Consumers

# Consumer Driven Approach

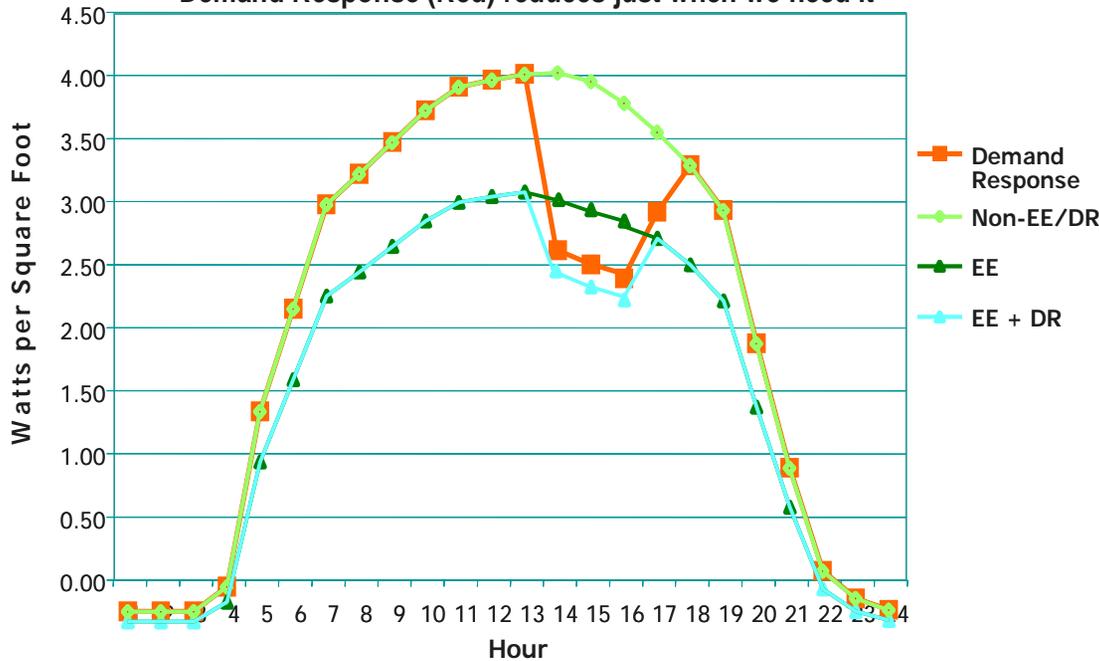

# Innovative Uses of DR for Clean Energy

# Clean Capacity Through Demand Response

Energy Efficiency (Blue) reduces load all the time  
 Demand Response (Red) reduces just when we need it

# Integrated DR Product Suite

Demand Response Automation Platform

DR Leader & Roadmap

# Evolving Business Models

## Traditional Utility

- Grid Generation
- Retail Electric Supply
- Capacity Markets
- Utility-Scale Renewables
- Reliability

## Traditional Customer

- Meter Data Analysis
- Facilities Management
- Performance-based Contracting
- Distributed Generation
- Energy Procurement
- Power Quality

## Transaction Utility

- Grid Generation
- Utility-Scale Renewables
- Reliability

## Services

- Smart Meter
- DR+/-, EE
- Renewables
- Capacity Mkt

## Transaction Customer

- Performance Contracting
- DG/EE
- Procurement
- PowerQuality
- Emissions
- Service
- HVAC
- Maintenance

## PJM Load Response

### EMERGENCY

Designed to provide a method by which end-use customers may be compensated by PJM for reducing load during an emergency event.

### ECONOMIC

Designed to provide an incentive to customers or curtailment service providers to reduce consumption when PJM LMP prices are high.

***Load Response = Demand Side Response (DSR)***

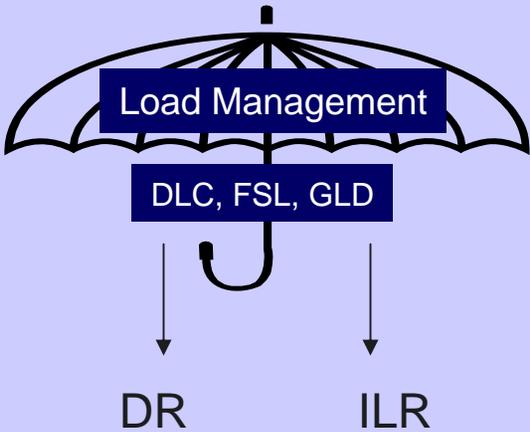

# Comparison of Revenue Opportunities for Demand Response Current vs. Revised

Revenue Opportunity	PJM (as of 12/31/05)	PJM with new initiatives
Real-Time/Spot Energy Sales	Yes	Yes
Day-Ahead Energy Sales	Yes	Yes
Forward Energy Sales	No	Yes; Forward Energy Reserve Market (under development)
Forward Capacity Sales	Yes, but limited	Yes; RPM auction provides options for participants
Energy & Capacity payment for emergencies	Not in all cases	Yes; Emergency program changes ensure payment
Ancillary Services	No	Yes; Synchronous Reserves & Regulation (mandatory training for CSP's @ pjm.com)

## Definition & Purpose of RPM

- Reliability Pricing Model (RPM) is PJM's new resource adequacy construct
- The purpose of RPM is to develop a long term pricing signal for capacity resources and LSE obligations that is consistent with the PJM Regional Transmission Expansion Planning Process (RTEPP)
- RPM adds stability and a locational nature to the pricing signal
- RPM replaced PJM's capacity construct effective June 1, 2007

# Load Response in PJM

Energy	Capacity	Ancillary Services
<ul style="list-style-type: none"> <li>• Economic</li> <li>• Emergency – Energy Only</li> </ul> <p>Voluntary load reductions for <u>energy</u>, even during a PJM emergency event</p>	<ul style="list-style-type: none"> <li>• Emergency – Capacity Only</li> <li>• Emergency – Full (also gets an energy payment)</li> </ul> <p><b>Mandatory</b> reduction for PJM Load Management emergency event</p> 	<ul style="list-style-type: none"> <li>• Synchronous Reserves               <ul style="list-style-type: none"> <li>• Regulation</li> </ul> </li> </ul> <p>Load bids into these markets and responds to an event exactly like a generator</p> <p><b>Mandatory</b> response to a Synchronous Reserve event if cleared in market</p>

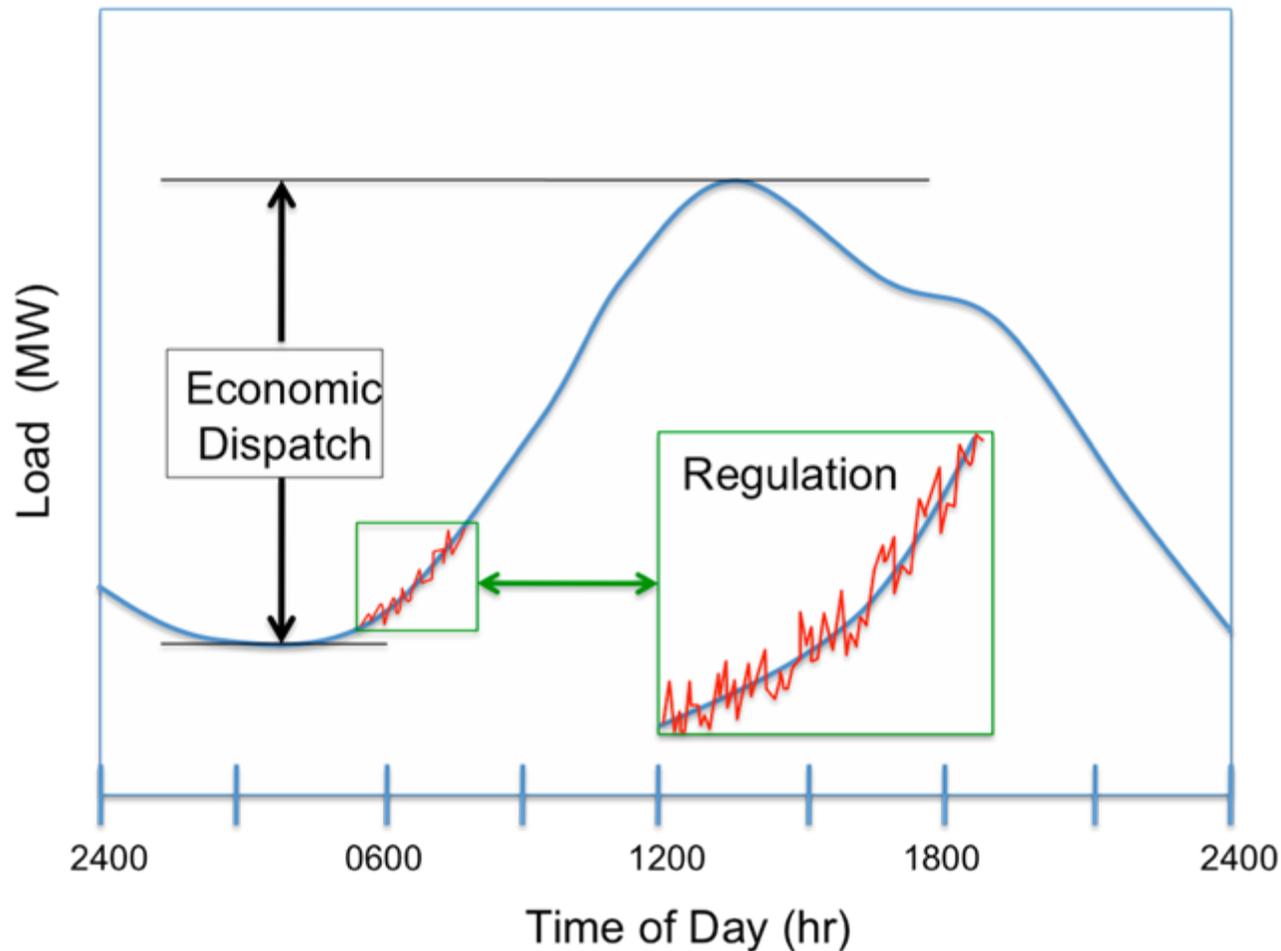

Source:

## Other Options for Participation

- **PJM Ancillary Service Markets**
  - PJM Regulation Market
    - Automatic adjustment of load in response to PJM regulation control signal
  - PJM Synchronized Reserve Market
    - Ability to achieve required reduction of load in a 10 minute period when notified by PJM
- Details of these markets are covered in “Load Response for Ancillary Services” training presentation
- Mandatory online training for participation

# What is Frequency Regulation?

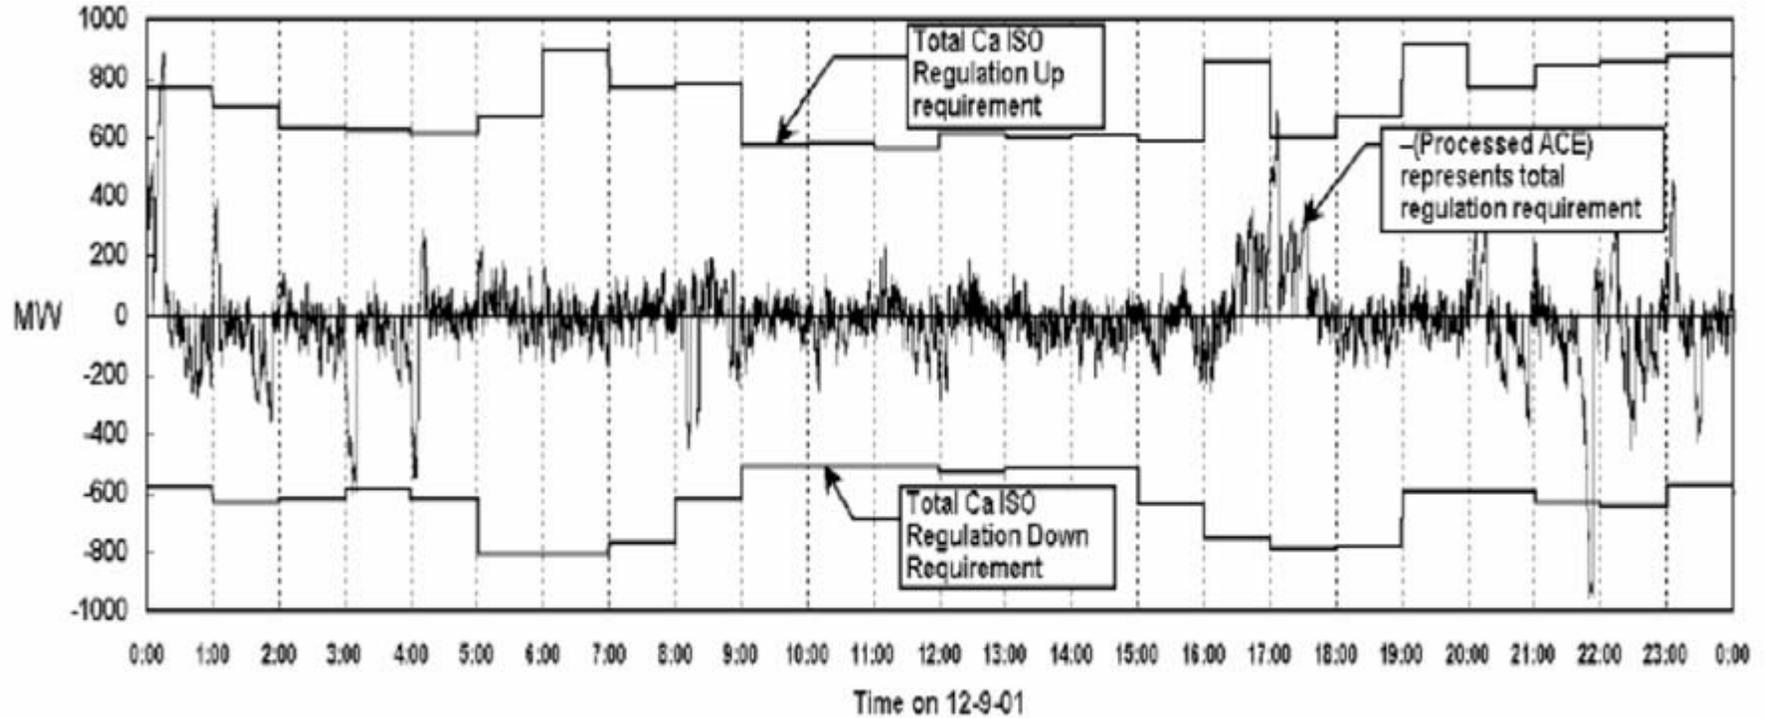

Regulation is the continuous adjustment of AC electricity frequency (60 Hz)

# What Does Regulation Cost?

- Contract for expected need (+ margin)
- Cost (fossil fuels) is opportunity cost of not generating during that period
- Cost of energy provided to Ancillary Service is far above wholesale or retail rates
- Contract is for capacity, not energy

# Regulation Contract

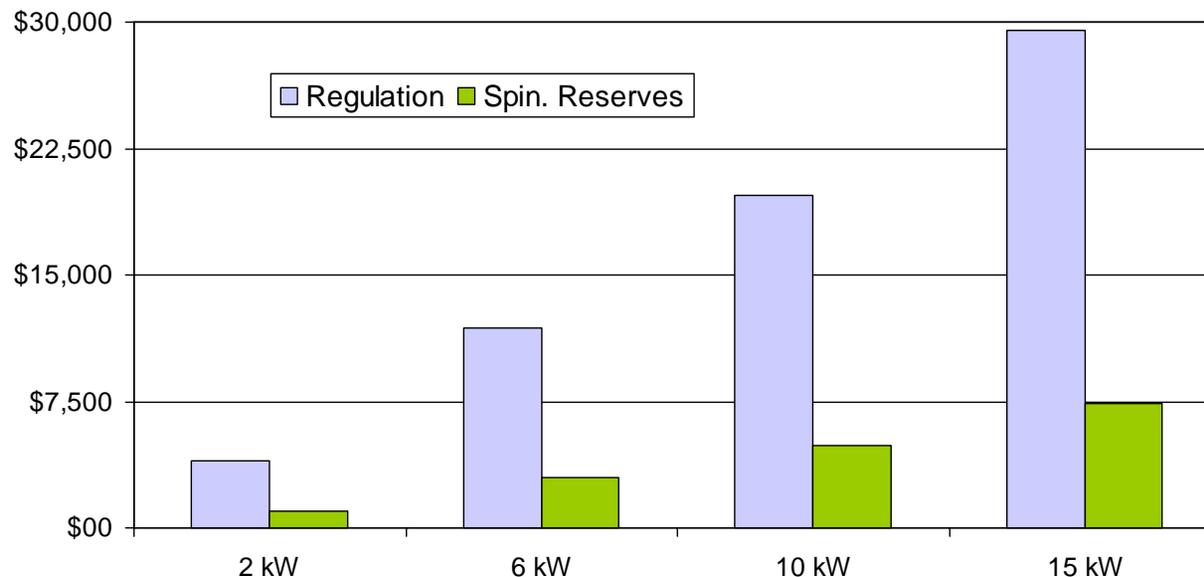

# Regulation - Market Value

	Average Market Clearing Price (\$/MWh)		
	2004	2005	2006
<b>PJM</b>	\$42.75	\$49.73	\$32.69
<b>ISO-NE</b>	\$28.92	\$30.22	\$24.02
<b>NY ISO</b>	\$22.59	\$39.21	\$51.26
<b>ERCOT</b>	\$22.66	\$38.07	n/a
<b>CA ISO</b>	\$29.00	n/a	\$36.04

# Basic per Vehicle Values

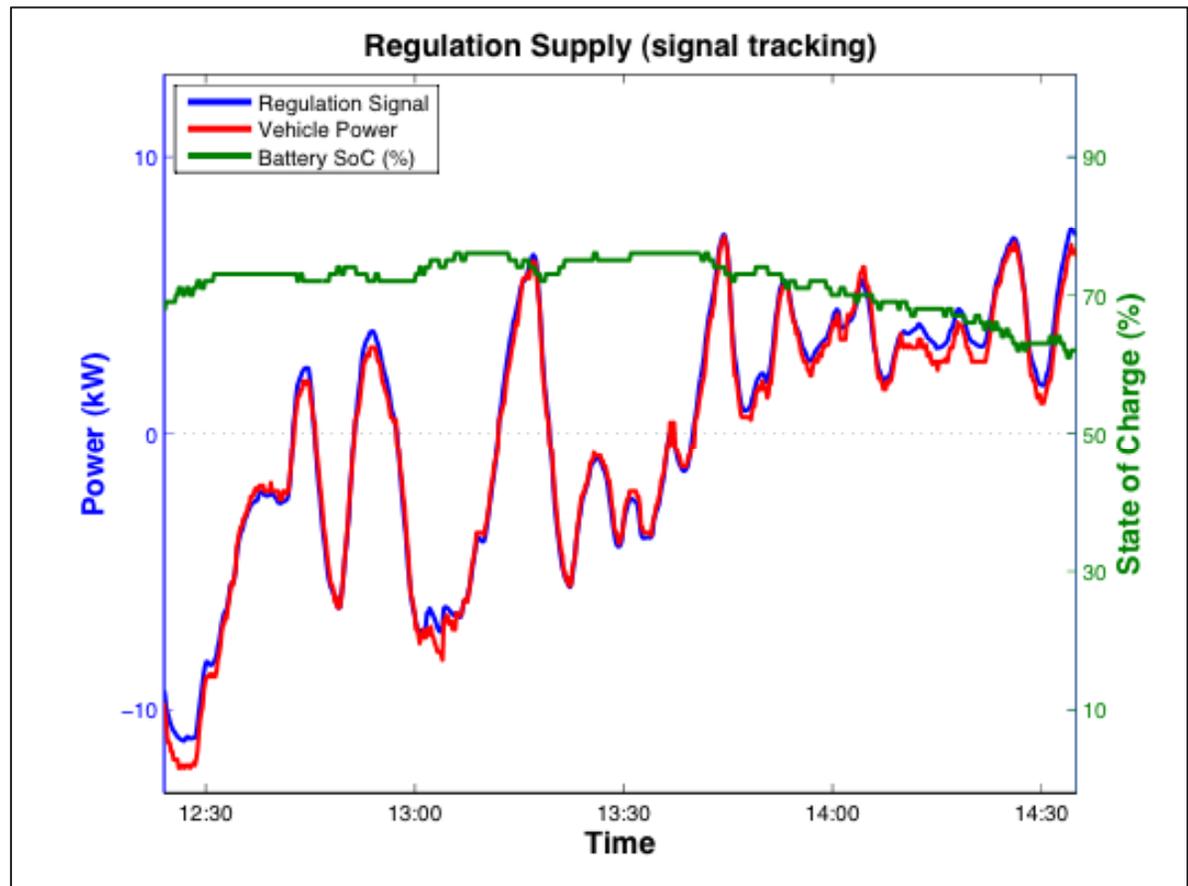

## 10 –Year Present Value V2G Revenue Potential

Assumptions: 80% availability; Reg. \$40/MW-h; Spin. \$10/MW-h, 7% discount rate, example calculations

# Providing Regulation from an EV

- Red line shows power (kW) to the battery (left axis)
- Green line shows the state of charge steadily rising (right axis)
- Blue line shows shows the regulation signal. Notice how closely the commanded power follows the power delivered by the vehicle

# Consumer Driven Approach
